Not Binding Operating and Assembly Instruction
Progressive Cavity Pump

This operating and assembly instruction is only for general information.

Type
BCSO 025-24 to 130-6L
(open pin joint)
1 Safety

1.1 General notes
1.2 Safety and warning notes
  1.2.1 Warning notes
  1.2.2 Danger symbols
  1.2.3 Information symbols
1.3 Dangers that can be caused by the machine
1.4 Qualification of the personnel
1.5 Authorised people
  1.5.1 Tasks and information for the owner/operators
  1.5.2 Safety notes for maintenance, inspection and assembly work
1.6 Personal protective equipment
1.7 Safety and protective devices
1.8 Foreseeable misuse
1.9 Designated use
1.10 Warranty

2 Description of the pump

2.1 General description
2.2 Mode of action and pumping principle of the pump
2.3 Constructive design

3 Technical Data

4 Transport, Intermediate storage, Disposal

4.1 Safety
4.2 Transport
  4.2.1 Dimensions, weight and centre of gravity
  4.2.2 Symbol
  4.2.3 Lashing points (AP) for lifting devices
  4.2.4 Unpacking the machine
4.3 Temporary storage/corrosion protection
4.4 Disposal
5 Assembly / Installation

5.1 Mounting tools / lifting gear
5.2 Space requirement
  5.2.1 Dimension for stator replacement
5.3 Assembly of the complete mounted pump
5.4 Power supply of the pump
5.5 Pipelines
  5.5.1 Suction and pressure connection
  5.5.2 Pipeline dimensions
  5.5.3 Residue-free pipelines
  5.5.4 Tension-free assembly

6 Commissioning / De-Commissioning

6.1 Commissioning report
6.2 Measures before commissioning
  6.2.1 Checking pipelines
  6.2.2 Protective devices on the pump
  6.2.3 Electrical / hydraulic connections
  6.2.4 Direction of rotation check
  6.2.5 Additional devices - optional
6.3 Initial commissioning/repeated commissioning
  6.3.1 Avoiding dry running of the pump
  6.3.2 Pressure in the suction and pressure connection
6.4 De-commissioning
  6.4.1 Switching off the pump
  6.4.2 Emptying the pump
  6.4.3 Dismantling the pump
  6.4.4 Preservation/storage of the pump

7 Maintenance

7.1 Preventative measures
  7.1.1 Pump down-time
7.2 Lubrication
  7.2.1 Joint grease
7.3 Inspection
7.4 Cleaning of CS pumps

8 Malfunctions, causes, rectification

9 Pump Dismantling / Reassembly

  9.1.1 Prepare the pump for dismantling
  9.1.2 Dismantling
  9.1.3 Reassembly
9.2 Rotating unit – individual parts ................................................................. 35
  9.2.1 Dismantling
  9.2.2 Rotating unit (RTE) - prepare individual parts for reassembly
  9.2.3 Rotating unit (RTE) - individual parts - reassembly

9.4 Mechanical seal ......................................................................................... 38
  9.4.1 Safety
  9.4.2 Application conditions and material version
  9.4.3 Design
  9.4.4 Commissioning
  9.4.5 Monitoring during operation
  9.4.6 Dismantling of mechanical seal
  9.4.7 Reassembly of mechanical seal

10 Spare parts ........................................................................................................ 40
  10.1 Order template for spare parts ................................................................. 42

11 Special tools .................................................................................................... 46

12 Related documents .......................................................................................... 48

13 Appendix .......................................................................................................... 50
  13.1 Manufacturer's documents / suppliers

Subsidiaries
1.1 General notes

- Always keep the operating and maintenance instructions close by the machine.
- If problems cannot be solved with reference to the operating and maintenance instructions, please contact the manufacturer.

Observe the following points in addition to these operating and maintenance instructions:

- Prohibition, warning and mandatory signs, warning notes on the machine
- Relevant laws and ordinances
- Statutory provisions on accident prevention
- Corresponding harmonised standards and regulations

1.2 Safety and warning notes

- Comply with safety and warning notes for safe and efficient use of the product.

Signal words for specific dangers and (possible) consequences are explained below. These are supplemented by symbols (pictograms) if necessary.

1.2.1 Warning notes

<table>
<thead>
<tr>
<th>Signal word</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOTICE</td>
<td>Caution for machine! Possible danger. Material damage can occur.</td>
</tr>
<tr>
<td>CAUTION</td>
<td>Caution for people and machine! Possible danger. Minor injury or damage to property can occur.</td>
</tr>
<tr>
<td>WARNING</td>
<td>Warning for people! Possible danger. Death or serious injury can occur.</td>
</tr>
<tr>
<td>DANGER</td>
<td>Danger for people! Possible danger. Immediate risk of severe or fatal injury.</td>
</tr>
</tbody>
</table>

1.2.2 Danger symbols

- Warning: Suspended load.
- Warning: Dangerous electrical voltage.
1.2.3 Information symbols

### NOTICE

Ensure environmental protection. Wear eye protection.

- Instruction to act/take measures
- List item

1.3 Dangers that can be caused by the machine

seepex machines are built in accordance with the state of the art. Nevertheless, there is a residual risk, because the machine works with:

- Mechanical movements that pose a danger
- Electrical voltages and currents

We have used design measures and applied safety technology to minimise the risk to the health of people posed by this danger.

1.4 Qualification of the personnel

This handbook is intended for:

- Owner
- Operators
- Setters
- Maintenance personnel

1.5 Authorised people

People authorised to undertake operation, set up and maintenance are instructed and trained specialists employed by the owner/manufacturer.

Detailed technical knowledge is essential for performing any work on the machine.

The owner is responsible for:

- Personnel training
- Compliance with safety regulations
- Compliance with operating and maintenance instructions

The operator must:

- Have received instruction
- Read and understood the relevant parts of the operating instructions before starting work
- Know the safety devices and regulations
1.5.1 Tasks and information for the owner/operators

- Regularly check and maintain the machine, replacing all parts in good time which no longer guarantee safe operation.
- It is essential to comply with the procedure described in the operating instructions for shutting down the machine.
  - On completion of work, attach all safety and protective devices and make sure they are functioning.

1.5.2 Safety notes for maintenance, inspection and assembly work

- Do not work on the machine or system unless it is stationary and depressurised.
- Switch off the master switch and pull out the power plug before starting work on live components.
- Comply with the procedure for shutting down the machine as described in the Shut-down chapter.
- Decontaminate (de-toxify) machines that are used for pumping media that can be harmful to health.
- Refer to the Initial start-up chapter before repeated start-up of the machine.

1.6 Personal protective equipment

- Wear personal protective equipment and/or additional equipment for your own safety.
- Avoid/limit risks by the use of collective technical protective equipment or by organisational measures at work.

1.7 Safety and protective devices

- Prior to start-up, bolt seepex machines onto a concrete foundation so as to ensure stability.
- Starting and stopping devices must be clearly recognisable. Take appropriate measures to avoid defects.
  - No protective device is necessary for checking and/or setting the shaft seal.
  - Hot surfaces are identified with a danger symbol on the machine.

1.8 Foreseeable misuse

Serious personal injury and damage to property can be caused by:

- Incorrect use
- Incorrect installation or operation of the machine
- Impermissible removal of necessary protective equipment
1.9 Designated use

- Only use seepex machines if they are in perfect condition and in compliance with the operating and maintenance instructions.
- Do not start up the machine unless the system in which the machine is installed is in accordance with the provisions of the applicable guidelines and statutory regulations.
- Equivalent sustained sound pressure level at workplaces of operating personnel $C_{75} \text{dB (A)}$. Cavitation-free operation of the machine and screwed connection to concrete foundation are essential.
- seepex machines are components that are exclusively intended for pumping media in accordance with the technical data (→ chapter 3). Written approval must be obtained from the manufacturer before other media are pumped.
- Refer to the information on the type plate and the operating instructions for technical data (→ chapter 3), and comply with them.
- The operating instructions are assigned to the seepex machine based on the commission number.

1.10 Warranty

- Warranty in accordance with our terms and conditions of delivery and order confirmation.
- It is a condition of the machine warranty that the machine must correspond to the listed operating instructions in accordance with the type plate/data sheet.
- All wearing parts are excluded from the warranty.
- These operating instructions are subject to copyright. Reproduction is not permitted and will be punished. Contravention will be pursued through the courts.
2.1 General description

seepex pumps are members of the group of rotating displacement pumps.

- Characteristic features
  - Special configuration/arrangement of the rotor and stator pumping elements.
  - Motion sequence

2.2 Mode of action and pumping principle of the seepex pump

- Sealing bands are produced through geometric design/contact of both conveying elements.
- Sealing bands ensure a perfect fit between the suction and pressure side.

Result:
- Increased pump suction.
- Higher pressure build-up independent of speed possible.

2.3 Constructive design

<table>

3.1 Data sheet

3.2 Characteristic Curves

3.3 Declaration

- Data sheet, characteristic curves and declarations are commission specific documents and not part of this not binding operating and assembly instruction.
4.1 Safety

**CAUTION**

Damage to property/injuries due to incorrect transport
Slight injury or damage to property can occur
➢ Comply with the safety notes and transport notes on the packaging.
➢ Use suitable means of transport, lifting devices and tools.
➢ Use protective equipment.

4.2 Transport

4.2.1 Dimensions, weights and center of gravity
➢ Note the dimensional drawing (→ chapter 5.6).

4.2.2 Symbols

• Meaning of symbol

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Top</td>
<td></td>
</tr>
<tr>
<td>Fragile item</td>
<td></td>
</tr>
<tr>
<td>Against moisture protect</td>
<td></td>
</tr>
<tr>
<td>Centre of gravity</td>
<td></td>
</tr>
<tr>
<td>Lashing points</td>
<td></td>
</tr>
</tbody>
</table>

4.2.3 Sling points (AP) for lifting devices

**WARNING**

Warning of suspended load.
Death of serious injury can occur.
➢ Use the lashing points (AP) for lifting devices.
➢ Note the centre of gravity (→ dimensional drawing, chapter 5.6).

4.2.4 Unpacking the machine

➢ Comply with the symbols and notices on the packaging.
➢ Remove the screwed connection between the machine and packaging.
➢ Remove the machine with a lifting machine/industrial truck.

4.3 Temporary storage/Corrosion protection

• All seepex machines have corrosion protection applied as standard prior to transport.
4.4 Disposal

**NOTICE**

**Damage to property if corrosion protection is missing**

Property damage can occur due to corrosion.

- Temporary storage must be in a dry, enclosed, frost-free room in order to provide protection against ambient influences.
- Contact seepex regarding the necessary corrosion protection for temporary storage.

**NOTICE**

**Environmental protection**

Material damage can occur.

- Drain the pumping medium and dispose of it in accordance with the regulations.
- Dispose of the machine with regard to its composition and existing regulations.
5.1 Mounting tools / lifting gear

CAUTION

Pump falling over.
Slight injury or damage to property can occur.
- Adhere to the lifting tool’s starting point.
- Pay attention to the dimensions, weight and centre of gravity of the pump.
- Use suitable mounting tools/lifting gear.

5.2 Space requirement

The required space should be determined by considering the following factors:
- Dimensions and weight.
- Requisite transport and lifting equipment.
- Pipe routing – dismantling (dimension for stator replacement).

5.2.1 Dimension for stator replacement (P)

- Refer to the dimensional drawing.

5.3 Assembly of the complete mounted pump

- Assemble according to technical data (→ chapter 3.).
- Note dimensional drawing.

Tension-free mounting of the pump

- Balance unevenness with suitable supports.
  - Applies to mounting on foundations/load-bearing elements.
  - Total areas of all pump bearing areas are resting on the surface.

Correct position of the drives

- All drives are set up ready for operation and mounted.
- Correct displacements of the drive during transport/installation of the pump by adjusting/fixing the drive.

CAUTION

Safety protection equipment.
Slight injury or damage to property may result.
- Connect safety protection equipment and activate.
5.4 Power supply of the seepex pump

DANGER
Supply voltage and power frequency.
Death or serious injury will result.
- Heed type plate on the pump.
- Pay attention to manufacturer's directions (→ chapter 13.).
- Pay attention to safety regulations.

5.5 Pipelines

5.5.1 Suction and pressure connection
- Refer to the dimensional drawing for the position, nominal width and standard.
- Note direction of rotation/flow direction.

5.5.2 Pipeline dimensions
- Adhere to specifications regarding pressure in the pressure respectively suction connection.
- Note technical data (→ chapter 3.).
- Nominal width of suction pipe = nominal width of suction connection of pumps.

5.5.3 Residue-free pipelines

NOTICE
Damage to property through assembly residue.
No claims under guarantee if violated.
- Keep all pipe work free of foreign objects.
- Remove weld spatters, screws, steel chips etc.

5.5.4 Tension-free assembly
- Assemble pipelines and other components in a tension-free manner on the pump.
### 6.1 Commissioning report

Send commissioning report online to [www.seepex.com](http://www.seepex.com)

6.2 Measures before commissioning

➢ Note the technical data (→ chapter 3.).

6.2.1 Checking pipelines

➢ Check flange screwed connections (SCH).

➢ Check threaded connections (G).

NOTICE

Ensure the liquid can flow through without obstruction.
Malfunction and/or irreparable damage to the pump.
➢ Open all shut-off elements before switching on the pump.

6.2.2 Protective devices on the pump

DANGER

Missing protective device.
Danger of pulling in and crushing.
➢ Equip the pump with a protective device. Protective devices provided for preventing contact with surfaces or moving parts must be regarded as suitable if contact is not possible in a test involving a test finger, with regard to the penetration possibility, strength and shock resistance.
➢ Comply with national protection regulations.
➢ In pumps with an open suction flange/feed hopper, attach touch protection. These safety clearances protect those persons who are attempting to reach danger areas without additional help and under the conditions defined for various situations of reaching up, reaching under or reaching through.
In shaft seals, touch protection is only necessary if there are components on the rotating shaft.

6.2.3 Electrical/hydraulic connections

DANGER

Dangerous voltage.
Death or serious injury can occur.
➢ Note safety regulations.
➢ Disconnect motor from all sources of energy.
➢ Secure electrical connections against restarting.
6.2.4 Direction of rotation check

- The pump direction of rotation determines the flow direction of the pumping medium.
- Note the direction of rotation arrow on the type plate.

6.2.5 Additional devices - optional

- Refer to additional devices (→ chapter 12.1).

6.3 Initial commissioning/repeated commissioning

- Start up the pump.

**NOTICE**

**Dry running of the pump.**
Malfunction and/or irreparable damage to the pump.

- Fill the suction casing with liquid in order to lubricate the pumping elements.

6.3.1 Avoid dry running of the pump

**NOTICE**

**High temperature between rotor and stator.**
Stator material burned.
Complete failure of the pump.

- Make sure that the suction-side conveying capacity does not cavitate.
- If this cannot be guaranteed on the machine side, assemble a seepex dry running protection (TSE).

6.3.2 Pressure in the suction and pressure connection

**CAUTION**

**High pressure.**
Malfunction and/or irreparable damage to the shaft seal or pump.

- Maintain pressure in the suction connection in accordance with the technical data (→ chapter 3.).

**Recommendation:**

- Assemble an oil-filled contact pressure gauge to monitor and deactivate the pump.
6.4 De-commissioning

Protect the pump and additional devices against the following:
- Frost
- Deposit of solids
- Sedimentation from the liquid
- Corrosion of parts that come into contact with the medium

6.4.1 Switching off the pump

**DANGER**

_Dangerous voltage._
Death or serious injury can occur.
- Note safety regulations.
- Disconnect motor from all sources of energy.
- Secure electrical connections against restarting.

6.4.2 Emptying the pump

**CAUTION**

_Liquid draining out._
Minor injury or damage to property can occur.
- Wear suitable protective clothing.
- Refer to the technical data (→ chapter 3.) for the corresponding configuration of the pump housing.

To drain the pump:
- If the pump housing has screwed plugs, remove the screwed plugs.
- Drain using a connection branch (suction casing, pressure branch) if the pump housing is coated or the housing does not have screwed plugs.
- Drain the residual liquid from the pump housing.
- Drain the pipelines on the suction and pressure sides, or shut off behind the pump connections.
6.4.3 Removing the pump

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Risk of pump tipping or falling. Death or serious injury can occur.</td>
</tr>
<tr>
<td>Support the drive unit to guarantee stability.</td>
</tr>
</tbody>
</table>

Pipeline dismantling

- Remove flange bolts (SCH) and flange seals (DFL).
  - Pipeline dismantling
  - Remove flange bolts (SCH) and flange seals (DFL).
  - Remove bolts (SCH) from the pump feet.

Pipeline dismantling

- Remove threaded connections (G).
  - Pipeline dismantling
  - Remove threaded connections (G).
  - Remove bolts (SCH) from the pump feet.

6.4.4 Preservation/storage of the pump

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Damage to property due to lack of corrosion protection. Property damage can occur due to corrosion.</td>
</tr>
<tr>
<td>Contact seepex to discuss suitable preservation measures.</td>
</tr>
<tr>
<td>– State the commission number of the pump.</td>
</tr>
</tbody>
</table>
7.1 Preventive measures

The maintenance personnel must have these operating instructions, follow them and also require corresponding qualifications.

### DANGER

**Dangerous voltage.**
Death or serious injury can occur.
- Note safety regulations.
- Disconnect pump from all sources of energy.
- Secure electrical connections against restarting.

#### 7.1.1 Pump down-time

### NOTICE

**Pump down-time.**
Production failure due to wear.
- Acquisition of a set of wearing parts and a set of gaskets.

7.2 Lubrication

#### Lubrication Table

<table>

7.4 Cleaning of CS pumps

7.4.1 Application

- seepex pumps of the CS range can be universally implemented in the food, beverage, pharmaceutical, cosmetic and chemical industries.
- They meet the highest standards in terms of quality, hygienic design, and careful product conveyance.
- The pumps can be cleaned and disinfected in a circular or flow process without having to be dismantled.

7.4.2 Observed guidelines

- seepex pumps of the CS range are certified in accordance with 3-A Sanitary Standards (USA) (model designations: BCSO, BTCS, MDC, MDTC) and designed according to the EHEDG guideline.
- In addition to AISI 300 series stainless steels, FDA-compliant non-metallic materials are also used.
- For pumps with closed joints, joint grease with a declaration of conformity in accordance with NSF-H1 is used (NSF = The Public Health and Safety Company, USA).

7.4.4 Designs

7.4.4.1 BCSO, MDC ranges
- Rotating unit (RTE) with open joints.
- Certified in accordance with 3-A Sanitary Standards and designed according to EHEDG guidelines.
- Conveying capacities: BCSO 30 l/h - 130 m³/h; MDC range 0.5 l/h - 500 l/h.
- Pressures: up to 24 bar.

7.4.4.2 BSCB range
- Rotating unit (RTE) with closed pin joints.
- Conveying capacities: 30 l/h - 130 m³/h.
- Pressures: up to 24 bar.

7.4.4.3 BTCS, MDTC ranges
- Feed hopper pump with cylindrical/conical compression zone and a feed screw for conveying highly viscous products with low flowability.
- Rotating unit (RTE) with open joints, optionally with closed joints.
- Certified in accordance with 3-A Sanitary Standards (open joint design) and designed according to EHEDG guidelines.
- Conveying capacities: BTCS range 30 l/h - 130 m³/h; MDTC range 0.5 l/h - 500 l/h.
- Pressures: up to 24 bar.

7.4.5 Benefits and properties
- Pump housings which are almost dead space free prevent product deposits.
- High-quality surfaces of inner parts which come into contact with the product allow residue-free cleaning.
- Easy maintenance due to plug-in between rotating unit and drive.
- Mechanical seals, which are adapted to the particular application, ensure a hygienic shaft seal.
- Stator material and secondary seals with FDA approval guarantee high product safety.
- A tangentially aligned flushing connection (optional) enables extensive residual draining of the pump.
- Flushing with high flow speed within the suction casing enables residue-free cleaning.
- Disinfection can be carried out using steam, superheated steam or chemical disinfectant.
7.4.6 Cleaning processes (CIP/SIP)

General

- Production installations in the food, beverage, pharmaceutical, cosmetic and chemical industries are often equipped with automated cleaning systems.

- CIP stands for "Cleaning in Place"
  - This means that the respective installation equipment does not have to be disassembled or dismantled for cleaning.
  - High flow speed flushing within the casing parts of the pump enables residue-free cleaning.

- SIP stands for "Sterilisation in Place"
  - Thermal or chemical disinfectants, i.e. lowering the total germ level to a very low amount without disassembling or dismantling the pump.
  - Disinfectants, hot water or steam can be used as a medium.
7.4.6.1 Cleaning recommendations for CIP

- Flush the pump thoroughly before commissioning it for the first time.
- Clean the pump so that it conforms to the required hygiene regulations.
- Perform customer installation according to the figure in chapter 7.4.6.
- Install the pump so that it can be cleaned residue-free at the application location.
- Flushing processes must be carried out at a sufficient flow speed. Recommended flow speed is at least 1.5 m/s.
- During the individual flushing processes, operate the pump for max. 5 min using a low rotation speed. Then convey the cleaning agent through the bypass line while the pump is switched off.
- Use a suitable cleaning agent.

NOTICE

Operating the pump for a longer period (> 5 min./flushing process) during the cleaning process
Damage to property can occur.

- Operate the pump for max. 5 minutes using a low rotation speed.
- Then convey the cleaning agent through the bypass line while the pump is switched off.
  - Observe figure in chapter 7.4.6.

7.4.6.2 Recommended cleaning process

</tbody>
</table>

NOTICE

Application of other cleaning agents
Damage to property can occur.

- Consult with seepeX
7.4.6.3 Cleaning recommendations for SIP

- Clean the pump so that it conforms to the required hygiene regulations.
- Perform customer installation according to the figure in chapter 7.4.6.
- Install the pump so that it can be cleaned residue-free at the application location.
- For SIP processes with disinfectants or hot water, proceed in the same way as for CIP processes.
  - Cleaning recommendations can be found in chapter 7.4.6.1.
- For SIP processes with steam, the steam should only be conveyed through the bypass line.
  - Do not operate the pump at the same time.

Thermal disinfection

<table>
<thead>
<tr>
<th>CAUTION</th>

</table>

Chemical disinfection

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disinfection with chemical agents</td>
</tr>
<tr>
<td>Minor injuries can occur due to contact with cleaning agents.</td>
</tr>
<tr>
<td>➢ Observe notes from the manufacturer.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating the pump for a longer period (&gt; 5 min./flushing process) during the cleaning process</td>
</tr>
<tr>
<td>Damage to property can occur.</td>
</tr>
<tr>
<td>➢ Operate the pump for max. 5 minutes using a low rotation speed.</td>
</tr>
<tr>
<td>➢ Then convey the cleaning agent through the bypass line while the pump is switched off.</td>
</tr>
<tr>
<td>➢ Observe figure in chapter 7.4.6.</td>
</tr>
</tbody>
</table>
Refer to technical data (chapter 3.) for application range of the pump.

<table>

</tbody>
</table>
9. Dismantling/Reassembly of the pump

9.1 Prepare pump for dismantling

DANGER

Risk of fatal injury from electrical current.
There is an immediate danger of fatal electric shock through contact with live parts.
- Note safety regulations.
- Disconnect motor from all sources of energy.
- Secure electrical connections against restarting.

- Empty pipelines.
- Allow pipelines to cool.
- Remove pipeline connections (suction side/pressure side).
- Observe de-commissioning instructions (→ chapter 6).

9.1.1 Dismantle pump

WARNING Risk of injury due to lack of stability of pump. Crushing of body parts due to the pump or pump parts tipping or falling down.

Design with base plate
- Fasten base plate (GPU) to secure pump.
  - Recommendation: Fasten to suitable base using a screw fitting (SCH).

Design without base plate
- Fasten lantern (200) to secure the pump.
  - Recommendation: Fasten to suitable base using a screw fitting (SCH).

9.1.2 Dismantle pressure branch (700)
- Support stator (601) with support (S).
- Dismantle screw fitting (604, 606, 609).
- Remove pressure branch (700), trestles (607, 704) and tie bolts (602).
9. Dismantling/Reassembly of the pump

9.1.3 Dismantle stator (601)

- Raise/reposition (310) splash ring to remove (309) plug-in shaft pins.

- Eject (309) plug-in shaft pins.
  - Use a suitable tool (WS).

- Turn tool (WS) upwards as locking device for the stator removal.

**Dismantle dry-running protection device (TSE) (optional)**

**NOTICE** Damage to pump sided parts of the dry-running protection device (TSE) during dismantling the stator.

- Before dismantling the stator, remove all pump sided parts of the dry-running protection device (TSE).
  - Note chapter options and accessories (→ chapter 12.1).

- Turn stator (601) to remove it.
  - Apply lubricant (GM) into the opening between rotor (600) and stator (601) for easier dismantling.
  - Use tool (W2).

- Support rotor (600) with support (S).

9.1.4 Dismantle suction casing (500)

- Put a protective cover (SH) on the rotor (600).
- Prop up rotor (600) with support (S).
- Dismantle screw fitting (508, 509).
- Remove suction casing (500) and casing gasket (501).
- Remove tool (WS).
9.1.5 Dismantle rotating unit (RTE)

- Assemble tool (W10) as contact surface for mounting lever (W9).

- Pull off rotating unit (RTE) with shaft seal (SEA) from output shaft of drive (ANT).
  - Use tool (W9).

- Dismantle tool (W10).

- Remove splash ring (310) and shaft seal casing (SEA) from plug-in shaft (307).
  - Observe shaft sealing dismantling instructions (→ chapter 9.4).

9.1.6 Dismantle rotor (600), coupling rod (400) and plug-in shaft (307)

- Joint (G) dismantling note rotating unit - individual parts (→ chapter 9.2).

9.1.7 Dismantle drive (ANT)

- Dismantle screw fitting (210, 212, 213).
- Remove drive (ANT).
9.1.3 Assemble pump

**WARNING** Risk of injury due to lack of stability of pump. Crushing of body parts due to the pump or pump parts tipping or falling down.

**Design with base plate**
- Fasten base plate (GPU) to secure pump.
  - Recommendation: Fasten to suitable base using a screw fitting (SCH).

**Design without base plate**
- Fasten lantern (200) to secure the pump.
  - Recommendation: Fasten to suitable base using a screw fitting (SCH).

9.1.3.1 Assemble drive (ANT)

- Clean flange bearing surfaces (FLS), centering surface (ZD) and output shaft of the drive (ANT).
- Assemble drive (ANT) with screw fitting (210, 212, 213) on lantern (200).

9.1.3.2 Assemble rotor (600), coupling rod (400) and plug-in shaft (307)

- Joint (G) reassembly note rotating unit - individual parts (→ chapter 9.2).

9.1.3.3 Assemble rotating unit (RTE)

- Coat inner surface of splash ring (310) and outer surface of plug-in shaft (307) with anti-seize graphite petroleum (GC) for easier assembly of the splash ring (310).
- Slide splash ring (310) onto plug-in shaft (307).
  - Observe fitting position of splash ring (E) (lettering „SEA“).
9. Dismantling/Reassembly of the pump

9.1.3.4 Assemble suction casing (500)

- Moisten output shaft of drive (ANT) with anti-seize graphite petroleum (GC) for easier assembly.
- Push rotating unit (RTE) onto output shaft of the drive (ANT).

9.1.3.5 Assemble stator (601)

- Moisten output shaft of drive (ANT) with anti-seize graphite petroleum (GC) for easier assembly.
- Push rotating unit (RTE) onto output shaft of the drive (ANT).
- Fit rotor (600) with protective cover (SH).
- Prop up rotor (600) with support (S).
- Push casing gasket (501) onto the shaft seal casing (SEA).
- Assemble and align suction casing (500) with screw fitting (508, 509).
  - Use spirit level (WW).
- Tighten screw fitting (508, 509).
- Remove protective cover (SH) from rotor (600).

9.1.3.5 Assemble stator (601)

- Insert tool (WS) and turn downwards as locking device for stator assembly.

- For easier assembly of the stator (601), moisten outer surface of rotor (600) and inner surface of stator (601) with lubricant (GM).
- Support stator (601) with a support (S).
  - Push support (S) of suction casing (500) under stator (601).
- Slide the stator (601) onto the rotor (600) by turning it.
  - Use tool (W2).
9. Dismantling/Reassembly of the pump

- Remove tool (WS).
- Coat the plug-in shaft pins (309) with anti-seize graphite petroleum (GC) and insert in plug-in shaft (307).

- Note position of splash ring (310).
- Insert splash ring collar at a distance of 0.5 mm from the lantern (200).

Assemble dry-running protection device (TSE) (optional)

- Observe the chapter Options and additional accessories (chapter 12.1).

9.1.3.6 Assemble pressure branch (700)

- Insert tie bolts (602) together with trestle (607, 704) and screw fitting (604, 606) into suction casing (500).

- Push pressure branch (700) onto the stator (601).
- Insert tie bolts (602) loosely in the pressure branch (700).
- Remove the support (S).

- Assemble screw fitting (604, 606, 609).
- Tighten tie bolts (602) evenly.
9.2 Rotating Unit - Individual Parts

9.2.1 Dismantle rotating unit (RTE)

9.2.1.1 Separate joint - on rotor side
- Press circlip (401) out of groove.
- Slide support ring (491) onto coupling rod (400).
- Kuppelstangenbolzen (402) ausstoßen.
- Rotor (600) entfernen.

9.2.1.2 Separate joint - on drive side
- Press circlip (401) out of groove.
- Slide support ring (491) onto coupling rod (400).
- Kuppelstangenbolzen (402) ausstoßen.
- Kuppelstange (400) entfernen.

9.2.1.3 Rotating unit (RTE) – preparing component parts for assembly

Prepare rotor (600) for assembly
- Remove any damage.
- Clean rotor (600).

Prepare coupling rod (400) for assembly
- Clean coupling rod (400).
- In the event of wear/damage, replace coupling rod (400).

Prepare plug-in shaft (307) for assembly
- Remove any damage.
- Clean plug-in shaft (307).
9. Dismantling/reassembly

Prepare circlip (401) and support ring (491) for assembly

**NOTICE** Malfunction of the joints. Malfunction and/or destruction of the joints.
- Check circlip (401) and support ring (491) for damages and deformation.
  - Renew coupling rod pin (402) and circlip (401) and support ring (491) together.

9.2.2 Assemble rotating unit (RTE)

9.2.2.1 Connect coupling rod (400) and plug-in shaft (307)

- Slide support ring (491) onto coupling rod (400).
- Insert coupling rod (400) into plug-in shaft (307).
- Insert coupling rod pin (402).
- Push support ring (491) to the coupling rod pin (402).
- Push circlip (401) into groove of the plug-in shaft (307).
  - Ensure a correct fit of the circlip (401).

9.2.2.2 Rotor (600) and coupling rod (400)

- Slide closed circlip (491) onto coupling rod (400).
- Slide rotor (600) onto coupling rod (400).
- Insert coupling rod pin (402).
9. Dismantling/reassembly

- Push support ring (491) to the coupling rod pin (402).

- Push circlip (401) into groove of the rotor (600).
  - Ensure a correct fit of the circlip (401).
9.4 / 9.5 Shaft sealing

9.4.1 Safety

WARNING

Shaft seal is leaky.
Leakage may escape into the atmosphere.

➢ Take safety measures to protect persons and the environment.
➢ Wear suitable protective clothing.
➢ Dispose of leakage appropriately.
➢ Note applicable regulations when handling hazardous substances.

9.4.2 Operating conditions and material combination

• Adjust to the relevant application
