1.1 Notes on these instructions

1.1.1 General notes

➢ Always keep the operating and maintenance instructions close by the machine.
➢ If problems cannot be solved with reference to the operating and maintenance instructions, please contact SEEPEX.

Observe the following points in addition to these operating and maintenance instructions:

➢ Prohibition, warning and mandatory signs, warning notes on the machine
➢ Relevant laws and ordinances
➢ Statutory provisions on accident prevention
➢ Corresponding harmonised standards and regulations

1.1.2 Validity of these instructions

• These operating and assembly instructions are valid exclusively for machines with the commission no. specified on the cover sheet.
• The operating and assembly instructions are correlated with the SEEPEX machine by means of the commission no. on the type plate (TYS).

1. Safety

1.2 Safety-related Information

SEEPEX machines are built in accordance with the state of the art. Nevertheless, there is a residual risk, because the machine works with:

- Mechanical movements that pose a danger
- Electrical voltages and currents

1.3 Designated use

SEEPEX machines are individually configured. The machine is allocated to the operating and assembly instructions based on the commission no. The commission no. is indicated on the type plate of the machine and on the cover sheet of the operating and assembly instructions.

Observe the following points to ensure compliance with the intended use:

- Use the machine only for conveying media in accordance with the technical data (→ chapter 3)
- Use the machine only within the performance data as specified in the technical data (→ chapter 3)
- Make alterations and modifications to the machine only after obtaining the approval of SEEPEX
- Use the machine only in commercial and industrial areas
- Do not use the machine in explosive areas

1.4 Foreseeable misuse

Any use other than the intended use or any different use of the machine will be considered as improper use and can cause serious physical injury and damage to property.

In particular, the following is not admissible:

- Conveyance of conveying products other than those specified in the technical data (→ chapter 3)
- Operating the machine outside of the performance data specified in the technical data (→ chapter 3)
- Operating the machine without safety and protection devices
- Mechanical or electrical bypassing of machines or machine parts
- Use of parts other than the original parts
- Alterations, modification and manipulation
- Non-compliance with instructions and prescribed operating, maintenance and servicing conditions
- Non-compliance with the rules and regulations in the country of use and the statutory provisions and accident prevention regulations when handling the machine
- Operating the machine in explosive areas

1.5 Structure of warning notes

For the protection of personnel and for the safe and efficient use of the machine, observe warning notes.

Preceding warning notes

Preceding warning notes are placed at the beginning of each chapter or sequence of actions, and relate to the instructions following directly after.
1. Safety

Preceding warning notes with warning or mandatory signs
Specific dangers are identified with additional warning or mandatory signs.

Example:

**DANGER**

Type and source of danger.
Possible consequences.
- Measures to avert the danger.

Embedded warning notes
Embedded warning notes describe immediately relevant dangers, and are shown within a sequence of actions. They are placed immediately before the danger.

Examples:
- **WARNING** Type and source of danger. Possible consequences. Measures to avert the danger.
- **WARNING** Type and source of danger. Possible consequences. Measures to avert the danger.

1.5.1 Warning levels

Warning notes are identified by coloured warning symbols and signal word fields. The different warning levels are identified by additional signal words, and describe the extent of the danger.

**Personal injury**

**DANGER**

DANGER indicates a dangerous situation which, if not avoided, will result in death or serious injury.

**WARNING**

WARNING indicates a dangerous situation which, if not avoided, may result in death or serious injury.

**CAUTION**

CAUTION indicates a dangerous situation which, if not avoided, may result in minor or moderate injury.
1. Safety

Property damage

**NOTICE**

NOTICE is used when the situation is not associated with personal injury.

1.5.2 Warning symbols

In these operating and assembly instructions and on the machine, there are warning symbols.

- Ensure that these warning symbols are complied with.
- Warning symbols on the machine must be fully present and easily legible at all times.

<table>
<thead>
<tr>
<th>Warning symbols</th>
<th>Hazard</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Suspended load warning" /></td>
<td>Suspended load warning</td>
</tr>

</tbody>
</table>
1. Safety

1.7 Tasks, notes for the owners, operators and technicians

- Do not work on the machine or plant unless it is at a standstill and de-pressurised.
- Switch off the main switch and pull out the power plug before starting work on live components.
- Observe the procedure for shutting down the machine (→ chapter 6).
  - Follow decommissioning procedure.
  - Secure the machine against recommissioning.
- On completion of all work, attach all safety and protective devices and make sure they are functioning.
- Refer to chapter Commissioning before recommissioning the machine (→ chapter 6).

1.8 Personal protective equipment

- Wear personal protective equipment and/or additional equipment for your own safety.

<table>
<thead>
<tr>
<th>Sign</th>
<th>Meaning</th>
<th>Scope of application</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="Safety shoes" /></td>
<td>Wear safety shoes</td>
<td>Work in the area of the machine</td>

<td>Wear ear protection</td>
<td>Sustained sound pressure level &gt; 75 dB (A)</td>
</tr>
</tbody>
</table>
1. Safety

### 1.9 Safety and protective devices

- Before commissioning, bolt SEEPEX machines to a suitable foundation to ensure stability.
- Start-stop equipment must be clearly recognisable. In order to avoid errors, the operator must arrange corresponding measures.

<table>
<thead>
<tr>
<th>Sign</th>
<th>Meaning</th>
<th>Scope of application</th>

<td>Wear protective clothing</td>
<td>Possible contact with aggressive media</td>
</tr>
</tbody>
</table>

Protective devices protect those persons who are attempting to reach danger areas without additional help and under the conditions defined for various situations of reaching up, reaching under or reaching through.

- Equip pump with a protective device
  - In order to prevent contact with hot surfaces
  - In order to prevent contact with moving parts
    - Use finger probe to check protective device.
2.1 General description

seepex pumps are members of the group of rotating displacement pumps.

- Characteristic features
  - Special configuration/arrangement of the rotor and stator pumping elements.
  - Motion sequence

2.2 Mode of action and pumping principle of the seepex pump

- Sealing bands are produced through geometric design/contact of both conveying elements.
- Sealing bands ensure a perfect fit between the suction and pressure side.

Result:
- Increased pump suction.
- Higher pressure build-up independent of speed possible.

2.3 Constructive design

<table>
<thead>
<tr>

3.1 Data sheet

3.2 Characteristic Curves

3.3 Declaration

- Data sheet, characteristic curves and declarations are commission specific documents and not part of this not binding operating and assembly instruction.
4.1 Safety

**CAUTION**

Damage to property/injuries due to incorrect transport
Slight injury or damage to property can occur

- Comply with the safety notes and transport notes on the packaging.
- Use suitable means of transport, lifting devices and tools.
- Use protective equipment.

4.2 Transport

4.2.1 Dimensions, weights and center of gravity

- Note the dimensional drawing (→ chapter 5.6).

4.2.2 Symbols

- Meaning of symbol

  ![Symbol Diagram]

  - Top
  - Fragile item
  - Against moisture protect
  - Centre of gravity
  - Lashing points

4.2.3 Sling points (AP) for lifting devices

**WARNING**

Warning of suspended load.
Death of serious injury can occur.

- Use the lashing points (AP) for lifting divices.
- Note the centre of gravity (→ dimensional drawing, chapter 5.6).

4.2.4 Unpacking the machine

- Comply with the symbols and notices on the packaging.
- Remove the screwed connection between the machine and packaging.
- Remove the machine with a lifting machine/industrial truck.

4.3 Temporary storage/Corrosion protection

- All seepex machines have corrosion protection applied as standard prior to transport.
4.4 Disposal

**NOTICE**

**Damage to property if corrosion protection is missing**

Property damage can occur due to corrosion.

- Temporary storage must be in a dry, enclosed, frost-free room in order to provide protection against ambient influences.
- Contact seepex regarding the necessary corrosion protection for temporary storage.

**NOTICE**

**Environmental protection**

Material damage can occur.

- Drain the pumping medium and dispose of it in accordance with the regulations.
- Dispose of the machine with regard to its composition and existing regulations.
5. Assembly, installation

5.1 Safety during assembly and installation

**CAUTION**

Risk of injury due to improper assembly and installation of the machine.
Improper installation of the machine can lead to minor injuries and significant damage to property.

- Before starting work, ensure there is sufficient space for assembly.
- Ensure that the assembly location is clean and tidy. Loose components and tools lying on top of one another or left around the area are potential sources of accidents.
- Assemble the machine correctly.

5.2 Determine the space requirement

Define the space required based on the following factors:

- Dimensions and weight of the machine
- Required transport and hoisting devices
- Freedom of movement to:
  - Operate the drive
  - Read rotation speed and pressure displays
  - Set the retensioning device (optional)
  - Operate the seal flush supply system (optional)
- Space required for lubrication processes / lubricant replacement
- Dismantling of mechanical protective devices
- Required space for assembly work on the machine

Space requirement for service and setting work on SCT pumps:

<table>
<thead>
<tr>
<th>Size</th>
<th>Distance (P)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2-12S</td>
<td>300 mm</td>
</tr>
<tr>
<td>5-12S</td>
<td>315 mm</td>
</tr>
<tr>
<td>10-12S</td>
<td>350 mm</td>
</tr>
<tr>
<td>17-12S</td>
<td>375 mm</td>
</tr>
<tr>
<td>35-12S</td>
<td>430 mm</td>
</tr>
<tr>
<td>52-12S</td>
<td>530 mm</td>
</tr>
<tr>
<td>70-12S</td>
<td>530 mm</td>
</tr>
</tbody>
</table>

5.3 Assemble the complete mounted pump

- Assemble the pump in compliance with the technical data (→ chapter 3) and the specifications in the dimensional drawing (→ chapter 5.6).
- Comply with the specified screw tightening torques (→ chapter 9).
- Assemble the pump tension-free.
  - For assembly on foundations or load-bearing elements, compensate for any unevenness with suitable supports to ensure that all pump support surfaces are solidly seated.
5. Assembly, installation

- Ensure that the drives are seated correctly.
  - Shifting of the drive during transport/installation of the pump must be compensated for by aligning/securing the drive.
- Attach protective devices and make sure they are functioning.

5.4 Adjust and connect pipelines

- Refer to the dimensional drawing (→ chapter 5.6) and the technical data (→ chapter 3) for the position, nominal width and standard for the intake and pressure connection.
- Comply with the specified screw tightening torques (→ chapter 9).

5.4.1 Check pipeline dimensioning

- Note technical data (→ chapter 3).
  - Adhere to specifications regarding pressure in the pressure respectively suction connection.
  - Nominal width of suction pipe = nominal width of suction connection of pumps.

5.4.2 Check that the pipelines are free of residue

- **NOTICE** Damage to property due to assembly residues in the pipeline and machine. Keep all pipelines free from foreign bodies. Remove welding spatter, screws, steel chips, etc.

5.4.3 Assemble pipeline tension-free

- Assemble pipelines and other components in a tension-free manner on the pump.

5.5 Assemble liquid connections for add-on devices (optional)

- Refer to technical data (→ chapter 3) for type of additional device.
- Refer to chapter options and accessories (→ chapter 12.1) for technical description of additional devices.

5.6 Connect the power supply

**DANGER**

Risk of fatal injury from electrical current.
There is an immediate danger of fatal electric shock through contact with live parts.

- Observe applicable safety regulations.
- Prevent electrical connections from being switched on again.
### Commissioning / De-commissioning

#### 6.1 Commissioning report

Send commissioning report online to [www.seepex.com](http://www.seepex.com)

**Must be specified with every order!**

**Ausgabe issue** B / 17.03.2006 **Dokument document** OM.COM.05e **Blatt sheet** 1 (1)
6.2 Measures before commissioning

➢ Note the technical data (→ chapter 3.).

6.2.1 Checking pipelines

➢ Check flange screwed connections (SCH).

➢ Check threaded connections (G).

---

### NOTICE

**Ensure the liquid can flow through without obstruction.**
Malfunction and/or irreparable damage to the pump.

➢ Open all shut-off elements before switching on the pump.

---

6.2.2 Protective devices on the pump

---

### DANGER

**Missing protective device.**
Danger of pulling in and crushing.

➢ Equip the pump with a protective device. Protective devices provided for preventing contact with surfaces or moving parts must be regarded as suitable if contact is not possible in a test involving a test finger, with regard to the penetration possibility, strength and shock resistance.

➢ Comply with national protection regulations.

➢ In pumps with an open suction flange/feed hopper, attach touch protection. These safety clearances protect those persons who are attempting to reach danger areas without additional help and under the conditions defined for various situations of reaching up, reaching under or reaching through.

In shaft seals, touch protection is only necessary if there are components on the rotating shaft.

---

6.2.3 Electrical/hydraulic connections

---

### DANGER

**Dangerous voltage.**
Death or serious injury can occur.

➢ Note safety regulations.

➢ Disconnect motor from all sources of energy.

➢ Secure electrical connections against restarting.
6.2.4 Direction of rotation check

- The pump direction of rotation determines the flow direction of the pumping medium.
- Note the direction of rotation arrow on the type plate.

6.2.5 Additional devices - optional

- Refer to additional devices (→ chapter 12.1).

6.3 Initial commissioning/repeated commissioning

- Start up the pump.

**NOTICE**

Dry running of the pump.
Malfunction and/or irreparable damage to the pump.
- Fill the suction casing with liquid in order to lubricate the pumping elements.

6.3.1 Avoid dry running of the pump

**NOTICE**

High temperature between rotor and stator.
Stator material burned.
Complete failure of the pump.
- Make sure that the suction-side conveying capacity does not cavitate.
- If this cannot be guaranteed on the machine side, assemble a seepex dry running protection (TSE).

6.3.2 Pressure in the suction and pressure connection

**CAUTION**

High pressure.
Malfunction and/or irreparable damage to the shaft seal or pump.
- Maintain pressure in the suction connection in accordance with the technical data (→ chapter 3.).

Recommendation:
- Assemble an oil-filled contact pressure gauge to monitor and deactivate the pump.
6.4 De-commissioning

Protect the pump and additional devices against the following:

- Frost
- Deposit of solids
- Sedimentation from the liquid
- Corrosion of parts that come into contact with the medium

6.4.1 Switching off the pump

DANGER

Dangerous voltage.
Death or serious injury can occur.

- Note safety regulations.
- Disconnect motor from all sources of energy.
- Secure electrical connections against restarting.

6.4.2 Emptying the pump

CAUTION

Liquid draining out.
Minor injury or damage to property can occur.

- Wear suitable protective clothing.
- Refer to the technical data (→ chapter 3.) for the corresponding configuration of the pump housing.

To drain the pump:

- If the pump housing has screwed plugs, remove the screwed plugs.
- Drain using a connection branch (suction casing, pressure branch) if the pump housing is coated or the housing does not have screwed plugs.
- Drain the residual liquid from the pump housing.
- Drain the pipelines on the suction and pressure sides, or shut off behind the pump connections.
6.4.3 Removing the pump

**WARNING**

Risk of pump tipping or falling.  
Death or serious injury can occur.  
➢ Support the drive unit to guarantee stability.

**Pipeline dismantling**

➢ Remove flange bolts (SCH) and flange seals (DFL).  
   with/without base plate  
➢ Remove bolts (SCH) from the pump feet.

**Pipeline dismantling**

➢ Remove threaded connections (G).  
   with/without base plate  
➢ Remove bolts (SCH) from the pump feet.

6.4.4 Preservation/storage of the pump

**NOTICE**

Damage to property due to lack of corrosion protection.  
Property damage can occur due to corrosion.  
➢ Contact seepex to discuss suitable preservation measures.  
   – State the commission number of the pump.
7.1 Preventive measures

The maintenance personnel must have these operating instructions, follow them and also require corresponding qualifications.

![DANGER]

Dangerous voltage.
Death or serious injury can occur.
- Note safety regulations.
- Disconnect pump from all sources of energy.
- Secure electrical connections against restarting.

7.1.1 Pump down-time

![NOTICE]

Pump down-time.
Production failure due to wear.
- Acquisition of a set of wearing parts and a set of gaskets.

7.2 Lubrication

<table>
<thead>

</table>

### Causes

- Rotation speed too high.
- Joint play too large.
- Foreign objects in pump.
- Stator/rotor worn.
- Joint parts worn.
- Suction pipe blocked.
- Temperature of pumping liquid too high.
- Gland packing too firm/worn.
- Solid content and/or grain size too great.
- Conveying product hardens when the temperature drops below a certain limit.
- Sedimentation/gumming of solids when pump stationary.
- Conveying product hardens when the temperature drops below a certain limit.
- Stator swollen and unable to withstand conveying product.
- Bearings in pump drive housing or drive unit defective.
- Mechanical seal defective.

### Rectification

- Reduce rotation speed for high-viscosity media, risk of cavitation.
- Check mounting of coupling rod bushing.
- Dismantle pump, remove foreign bodies, replace defective parts.
- Dismantle pump and renew defective parts.
- Renew joint parts, use seepex pin joint grease.
- Clean the suction pipe.
- Check temperature, use an undersize rotor.
- Loosen packing gland or tighten. Renew unusable packing rings.
- Reduce pump speed, install screen with permitted mesh width. Increase liquid proportion.
- Rinse through and clean the pump immediately.
- Heat the pump.
- Select a suitable stator material, use an undersize rotor.
- Renew bearings.
- Check sliprings and O-rings for wear/resistance, renew if necessary.
9.1 Dismantling

All work steps and tools required for dismantling are specified in this chapter.

3-D ANIMATIONS

In addition to your SEEPEX operating and assembly instructions, 3-D animations of the individual dismantling steps are available.

Start animations

For printed operating and assembly instructions, scan the adjacent QR code.
9.1 Dismantling

9.1.1 Keep tools ready for the dismantling

**Recommended tools**
Keep the listed tools ready (not part of the delivery scope):

<table>

**Recommended auxiliary materials**

Keep the auxiliary materials listed available (not included in the scope of delivery):
- Lubricant (GM)

---

**NOTICE**

Damage to property due to inadequate lubricants (GM).
- Damage to components. Contamination of the conveying medium.
- Observe resistance to the materials used and the conveying medium.
- Use suitable lubricants (GM) only.

---

### 9.1.2 Prepare pump for dismantling

- Follow the instructions in the chapter Shut-down (→ chapter 6).

### 9.1.3 Dismantle pump

**WARNING** Risk of injury due to lack of stability of pump. Crushing of body parts due to the pump or pump parts tipping or falling down.

- Fasten base plate (GPU) to secure pump.
  - Recommendation: Fasten to suitable base using a screw fitting (SCH).
9.1 Dismantling

9.1.3.1 Dismantle stator (601)

**Dismantle dry-running protection device (TSE) (optional)**

**NOTICE** Damage to pump sided parts of the dry-running protection device (TSE) during dismantling the stator.

- Before dismantling the stator, remove all pump sided parts of the dry-running protection device (TSE).
  - Observe the chapter Options and additional accessories (→ chapter 12.1).

⚠️ **WARNING**

Leaking conveying medium.
Personal injury and/or material damage can occur.

- Take safety precautions to protect people and the environment.
- Wear suitable protective clothing.
- When handling hazardous substances, comply with applicable regulations.

⚠️ **CAUTION**

Risk of injury from moving and falling pump parts.
Body parts can get crushed.

- Turn kinetic rings (670) only on the outer surface.
- Secure lower adjusting segments (635) and stator half (601) to prevent them from falling.

- Loosen adjusting screws (639) until kinetic rings (670) are flush.
9.1 Dismantling

- Turn kinetic ring recess (670) until adjusting segment (635) is exposed.
- Remove adjusting segment (635).
  - Use tool (W36).

- Turn kinetic ring recess (670) until adjusting segment (635) is exposed.
- Remove adjusting segment (635).
  - Use tool (W36).

- Remove upper stator half (601).

- Turn kinetic ring recess (670) until adjusting segment (635) is exposed.
- Remove adjusting segment (635).
  - Use tool (W34).
9.1 Dismantling

- Turn kinetic ring recess (670) until adjusting segment (635) is exposed.
- Remove adjusting segment (635).
  - Use tool (W34).

- Mount tool (W35) with screw fitting (SCH) on suction casing (500).
- Insert stud bolt (632) into drilling of tool (W35).
- Secure loop (SCL) on rotor (600) and tool (W35).

- Remove lower stator half (601).
9.1.3.2 Dismantle rotor (600)

- Slide circlip (643) onto rotor (600).
  - Use tool (WZ).
- Slide support ring (682) towards rotor (600).

- Remove the lock washer (683).
  - Use a suitable tool (WS).

- Remove rotor (600) from rotor head (640).

- Dismantle tool (W35).
9.1 Dismantling

- Remove kinetic rings (670) from suction casing (500) and pressure branch (700).

- Remove circlip (643), support ring (682) and O-ring (642) from the rotor (600).

9.1.3.3 Dismantle pressure branch (700)

- Dismantle screw fitting (SCH).
- Remove pressure branch (700).

9.1.3.4 Dismantle suction casing (500)

- Dismantle screw fitting (SCH) from trestle (607).
9.1 Dismantling

9.1.3.5 Dismantle rotating unit (RTE)

Dismantle flush connection (SSU) (optional)

- Remove flush connection (SSU) from the casing of the shaft sealing (SEA).

- Raise/reposition splash ring (310) to remove plug-in shaft pin (309).

- Eject plug-in shaft pin (309).
  - Use a suitable tool (WS).

- Remove screw fitting (506, 507, 509).
- Remove suction casing (500) and casing gasket (501).
9.1 Dismantling

- Assemble tool (W10) as contact surface for mounting lever (W9).

- Pull off rotating unit (RTE) with shaft seal (SEA) from output shaft of drive (ANT).
  - Use tool (W9).

- Dismantle tool (W10).

- Remove splash ring (310) and shaft seal casing (SEA) from plug-in shaft (307).
  - See dismantling of shaft seal (SEA) (→ chapter 9.4).
9.1.3.6 Remove rotor head (640), coupling rod (400), plug-in shaft (307)

Dismantle holding band (406, 407)

- **CAUTION** Parts can be ejected at speed. Risk of injury to eyes. Wear safety goggles.
- Disconnect holding band loop (SCL).
  - Use suitable tools (WH).
- Press out parts of the holding band loop (SCL).
- Remove holding band (406, 407).

Separate joint - rotor side

- Pull back universal joint sleeve (405).
- Slide retaining sleeve (401) of rotor head (640).
  - Use a suitable tool (WM).
- Eject coupling rod pins (402).
  - Use tool (W5).
9.1 Dismantling

- Bend the coupling rod (400).
- Knock guide bushing (403).
  - Use tool (W5).

- Remove rotor head (640) and retaining sleeve (401) from coupling rod (400).

- For easier dismantling, apply lubricant (GM) to the interior of the universal joint sleeve (405) and the outer surface of the coupling rod (400).
- Remove universal joint sleeve (405) from coupling rod (400).

Separate joint - drive side

- For easier dismantling, apply lubricant (GM) to the interior of the universal joint sleeve (405) and the outer surface of the coupling rod (400).
- Remove universal joint sleeve (405) from coupling rod (400).

- Push retaining sleeve (401) off the plug-in shaft (307).
  - Use a suitable tool (WM).
- Remove retaining sleeve (401).
9.1 Dismantling

9.1.3.7 Dismantle lantern (200) and drive (ANT)

- Eject coupling rod pins (402).
  - Use tool (W5).

- Bend the coupling rod (400).
- Knock guide bushing (403).
  - Use tool (W5).

- Remove coupling rod (400) from plug-in shaft (307).

- Dismantle screw fitting (210, 212, 213).
- Remove drive (ANT) from lantern (200).
- Dismantle screw fitting (SCH).
- Remove lantern (200) from base plate (GPU).
9.2 Reassembly

All work steps and tools required for reassembly are specified in this chapter.

3-D ANIMATIONS

In addition to your SEEPEX operating and assembly instructions, 3-D animations of the individual assembly steps are available.

Start animations

For printed operating and assembly instructions, scan the adjacent QR code.
9.2 Reassembly

9.2.1 Keep tools ready for assembly

**Recommended tools**

Keep the listed tools ready (not part of the delivery scope):

<table>
<thead>
<tr>

<tr>
<td></td>
<td>Cartridge gun (WF)</td>
</tr>
</tbody>
</table>

**Recommended special tools**

Special tools are not part of the delivery scope.

- Order special tools using the order form (→ chapter 11).
9.2 Reassembly

Recommended auxiliary materials

Keep the auxiliary materials listed available (not included in the scope of delivery):

- Soft soap (GS)
- Anti-seize graphite petroleum (GC)
- SEEPEX joint grease (GF)
- Kinetic ring grease (KF) - SEEPEX BIO 10206

**NOTICE**

Damage to property due to inadequate lubricants (GM).

Damage to components. Contamination of the conveying medium.

- Observe resistance to the materials used and the conveying medium.

- Use suitable lubricants (GM) only.
9.2 Reassembly

9.2.2 Prepare components parts for assembly

9.2.2.1 Prepare rotor head (640) for assembly

- Remove any damage.
- Clean rotor head (640).

**NOTICE** Malfunction of the joints. Malfunction and/or destruction of the joints. Renew coupling rod pin (402) and guide bushings (403) together.

- Drive in guide bushings (403) (Depth X = 2/3).
  - Use tool (W4).

9.2.2.2 Prepare coupling rod (400) for assembly

- Clean coupling rod (400).

**NOTICE** Malfunction of the joints. Malfunction and/or destruction of the joints.

- Check coupling rod bushings (404) for wear.
  - In the event of wear, replace coupling rod (400), including the coupling rod bushings (404).

9.2.2.3 Prepare plug-in shaft (307) for assembly

- Remove any damage.
- Clean plug-in shaft (307).

**NOTICE** Malfunction of the joints. Malfunction and/or destruction of the joints. Renew coupling rod pin (402) and guide bushings (403) together.

- Drive in guide bushings (403) (depth X = 2/3).
  - Use tool (W4).
9.2 Reassembly

9.2.2.4 Prepare holding band (406, 407)

- Use prefabricated double-band holding bands only.
- Check the holding band (406, 407)
  - Bent-over holding band (406, 407) is in contact with holding band loop (SCL) to avoid damaging universal joint sleeve (405).
  - Press on holding band (406, 407) using tool (WFZ) if necessary.

9.2.3 Assemble pump

⚠️ **WARNING** Risk of injury due to lack of stability of the pump. Crushing of body parts due to the pump or pump parts tipping or falling down.

- Fasten base plate (GPU) to secure pump.
  - Recommendation: Fasten to suitable base using a screw fitting (SCH).

9.2.3.1 Assemble lantern (200) and drive (ANT)

- Assemble lantern (200) with screw fitting (SCH) on base plate (GPU).
- Clean flange bearing surfaces (FLS), centering surface (ZD) and output shaft of the drive (ANT).
- Assemble drive (ANT) with screw fitting (210, 212, 213) on lantern (200).
9.2.3.2 Assemble rotor head (640), coupling rod (400), plug-in shaft (307)

Connect rotor head (640) with coupling rod (400)

- Fill rotor head (640) with SEEPEX joint grease (GF).
  - Use tool (WF).
- Slide coupling rod (400) into rotor head (640).
- Push on retaining sleeve (401).

- Insert coupling rod pin (402).

- Knock the guide bushings (403) in.
  - Use tool (W5).

- Slide retaining sleeve (401) onto rotor head (640).
  - Use tool (W4).
9.2 Reassembly

Secure retaining sleeve (401) - rotor-side

- Secure retaining sleeve (401) at a distance of 180° by means of material deformation at the rotor head (640).
  - Use a suitable tool (WK).

Assemble universal joint sleeve (405) - rotor-side

- For simpler assembly of the universal joint sleeve (405), moisten the outer surface of coupling rod (400) with SEEPEX joint grease (GF).
- Fill interior of universal joint sleeve (405) with SEEPEX joint grease (GF).
  - Filling grade SEEPEX joint grease (GF) find in the document Maintenance (chapter 7).
  - Use tool (WF).
- Slide universal joint sleeve (405) onto joint.

**NOTICE** Damage of universal joint sleeve due to sharp tools. Leak in universal joint sleeve.
- Ventilate inner area of joint by lifting the universal joint sleeve (405).
  - Use a suitable tool (WS).

Assemble holding band - rotor-side

- Slide holding bands (406, 407) loosely onto universal joint sleeve (405).
Tighten holding band (406, 407) - rotor-side

- Insert holding band (406, 407) into tool (W3).
- Clamp holding band firmly using eccentric lever (EX).
- Turn crank (KUL) until the holding band (406, 407) is tensioned and is in contact with holding band loop (SCL).
- Carefully pull the holding band (406, 407) together until it is in contact with the universal joint sleeve around the circumference.

**Correct**
The holding band (406, 407) has drawn in the out shape of the universal joint sleeve and is firmly seated.

**False**
Holding band (406, 407) too loose, can slip off.

**Incorrect**
The holding band (406, 407) is too tight, universal joint sleeve will be damaged/sheared off.

- Cant up the holding band (406, 407).
- Swivel mounting tool (W3) approx. 60° upwards.
- Loosen crank (KUL) by a half turn.
- Swivel cutting lever (SH) forward until the pressure piece is lying behind the holding band loop (SCL).
Shear off holding band (406, 407) for material design stainless steel, corrosion-resistant steel

**NOTICE** Universal joint sleeve can be damaged by hammering and striking. Joint grease (GF) can leak out. Avoid hammering or striking the universal joint sleeve.

- Refer to the technical data (→ chapter 3) for the material design.
- Shear off holding band (406, 407) below holding band loop (SCL).
  - Strike cutting lever (SH) with the palm of your hand.
- Straighten the holding band (406, 407) carefully if it lifts up at the sheared-off end.

**Cut off holding band (406, 407) for material design stainless steel, heat-resistant steel**

**NOTICE** Universal joint sleeve can be damaged by hammering and striking. Joint grease (GF) can leak out. Avoid hammering or striking the universal joint sleeve.

- Refer to the technical data (→ chapter 3) for the material design.
- Cut off holding band (406, 407) below holding band loop (SCL).
  - Use tool (WBS).
- File down and deburr any projecting edges.

- The holding band (406, 407) must lie in the groove of the universal joint sleeve (405).
- Replace the holding band (406, 407) if the holding band (406, 407) slips back through the loop.
9.2 Reassembly

Connect coupling rod (400) and plug-in shaft (307)

- For easier assembly of the universal joint sleeve (405), lubricate the outer surface of coupling rod (400) with SEEPEX joint grease (GF).
- Slide holding bands (406, 407) and universal joint sleeve (405) onto coupling rod (400).

- Fill interior of joint head with SEEPEX joint grease (GF).
  - Use tool (WF).
- Slide the retaining sleeve (401) and plug-in shaft (307) onto the coupling rod (400).

- Insert coupling rod pin (402).

- Knock the guide bushings (403) in.
  - Use tool (W5).
9.2 Reassembly

- Slide retaining sleeve (401) onto plug-in shaft (307).
  - Use tool (W4).

**Secure retaining sleeve (401) - drive side**

- Secure retaining sleeve (401) at a distance of 180° by means of material deformation at plug-in shaft (307).
  - Use a suitable tool (WK).

**Assemble universal joint sleeve (405) - drive side**

- Fill the inside of universal joint sleeve (405) with SEEPEX joint grease (GF).
  - For filling grade of SEEPEX joint grease (GF), refer to the maintenance document (chapter 7).
  - Use tool (WF).
- Slide universal joint sleeve (405) onto joint.
**Notice**  Damage of universal joint sleeve due to sharp tools. Leak in universal joint sleeve.

- Ventilate inner area of joint by lifting the universal joint sleeve (405).
  - Use a suitable tool (WS).

**Assemble holding band - drive-side**

- Slide holding bands (406, 407) loosely onto universal joint sleeve (405).

- Tighten holding band (406, 407) - drive-side.
  - Insert holding band (406, 407) into tool (W3).
  - Clamp holding band firmly using eccentric lever (EX).
  - Turn crank (KUL) until the holding band (406, 407) is tensioned and is in contact with holding band loop (SCL).
  - Carefully pull the holding band (406, 407) together until it is in contact with the universal joint sleeve around the circumference.

**Correct**
The holding band (406, 407) has drawn in the out shape of the universal joint sleeve and is firmly seated.
9.2 Reassembly

False
Holding band (406, 407) too loose, can slip off.

Incorrect
The holding band (406, 407) is too tight, universal joint sleeve will be damaged/sheared off.

- Cant up the holding band (406, 407).
- Swivel mounting tool (W3) approx. 60° upwards.
- Loosen crank (KUL) by a half turn.
- Swivel cutting lever (SH) forward until the pressure piece is lying behind the holding band loop (SCL).

Shear off holding band (406, 407) for material design stainless steel, corrosion-resistant steel

NOTICE Universal joint sleeve can be damaged by hammering and striking. Joint grease (GF) can leak out. Avoid hammering or striking the universal joint sleeve.

- Refer to the technical data (→ chapter 3) for the material design.
- Shear off holding band (406, 407) below holding band loop (SCL).
  - Strike cutting lever (SH) with the palm of your hand.
- Straighten the holding band (406, 407) carefully if it lifts up at the sheared-off end.
9.2 Reassembly

9.2.3.3 Assemble rotating unit (RTE)

- Slide shaft seal casing (SEA) onto plug-in shaft (307).
  - See chapter Shaft seal reassembly (→ chapter 9.4).

- Moisten inner surface of splash ring (310) and outer surface of plug-in shaft (307) with anti-seize graphite petroleum (GC) for easier assembly of the splash ring (310).
- Slide splash ring (310) onto plug-in shaft (307).
  - Observe fitting position of splash ring (E) (lettering „SEA“).
9.2 Reassembly

- Moisten output shaft of drive (ANT) with anti-seize graphite petroleum (GC) for easier assembly of the rotating unit (RTE).
- Push rotating unit (RTE) onto output shaft of the drive (ANT).

- Moisten plug-in shaft pin (309) with anti-seize graphite petroleum (GC) and insert into the plug-in shaft (307).

- Note position of splash ring (310).
- Insert splash ring collar at a distance of 0.5 mm from the lantern (200).
9.2 Reassembly

Assemble the flush connection (SSU) (optional)

- Assemble flush connection (SSU).

9.2.3.4 Assemble suction casing (500)

- Push on casing gasket (501).
- Assemble and align suction casing (500) with screw fitting (506, 507, 509).
  - Use spirit level (WW).

- Assemble screw fitting (SCH) on trestle (607).

9.2.3.5 Assemble pressure branch (700)

- Assemble pressure branch (700) with screw fitting (SCH) to base plate (GPU).
9.2 Reassembly

- Align pressure branch (700).
  - Observe distance (X):
  - Use tool (RBM).

<table>
<thead>
<tr>
<th>Size</th>
<th>Distance (X)</th>
</tr>
</thead>
<tbody>
<tr>
<td>35-12S</td>
<td>688 mm</td>
</tr>
<tr>
<td>52-12S</td>
<td>818 mm</td>
</tr>
<tr>
<td>70-12S</td>
<td>878 mm</td>
</tr>
</tbody>
</table>

9.2.3.6 Assemble rotor (600)

- Moisten inner surfaces of kinetic rings (670) with SEEPEX kinetic ring grease.

- Slide kinetic rings (670) onto suction casing (500) and pressure branch (700).

- Mount tool (W35) with screw fitting (SCH) on suction casing (500).
- Insert stud bolt (632) into drilling of tool (W35).
- Secure loop (SCL) on tool (W35).
Insert O-ring (642) into circumferential groove of the rotor (600).

Slide circlip (643) and support ring (682) onto rotor (600).
- Observe the fitting position of support ring (682).

Moisten inner surface of rotor head (640) with anti-seize graphite petroleum (GC).
Slide rotor (600) into rotor head (640).
- Note position of the groove (X).

Press rotor (600) into the rotor head (640).
- Use tool (W9).
- Protect stator capture surface on the pressure branch (700) from possible damage and deformation.
9.2 Reassembly

- Insert lock washer (683) into the rotor head (640).
- Slide on support ring (682) onto the rotor head (640).
- Secure support ring (682) with circlip (643).
  - Use tool (WZ).
- Remove support (S) from rotor (600).

9.2.3.7 Assemble stator (601)

**CAUTION**
Risk of injury from moving and falling pump parts.
Body parts can get crushed.
- Turn kinetic rings (670) only on the outer surface.
- Secure lower adjusting segments (635) and stator half (601) to prevent them from falling.

**NOTICE**
Moisten stator outer surfaces with soft soap (GS).
Damage to stator halves (601).
- For easier assembly, only coat seal faces, stator internal surfaces of stator halves (601) and rotor (600) with soft soap (GS).
9.2 Reassembly

➢ Attach lower stator half (601).

➢ Dismantle tool (W35).

➢ Press stator half (601) onto tapered surfaces of pressure branch (700) and suction casing (500) and align.
  – Avoid damage to stator surfaces.

➢ Observe the segment order.
  – * = A-A, B-B, C-C, D-D
9.2 Reassembly

- Turn recess in kinetic rings (670) until adjusting segment (635) can be assembled.
- Insert guide bolt (636) for adjusting segment (635) into groove on pressure branch (700) and suction casing (500).
  - Observe the segment order (A-A).
  - Use tool (W34).

- Use adjusting segment (A-B).

- Attach upper stator half (601).
9.2 Reassembly

- Press stator half (601) onto tapered surfaces of pressure branch (700) and suction casing (500) and align.
  - Avoid damage to stator surfaces.
- Align long side of upper stator half (601) with lower stator half (601).

- Turn recess in kinetic rings (670) until adjusting segment (635) can be assembled.
- Insert guide bolt (636) for adjusting segment (635) into groove on pressure branch (700) and suction casing (500).
  - Use tool (W36).
- Observe the segment order (B-B).

- Turn recess in kinetic rings (670) upwards.
- Insert guide bolt (636) for adjusting segment (635) into groove on pressure branch (700) and suction casing (500).
  - Use tool (W36).
- Observe the segment order (D-D).

- Turn recess in kinetic rings (670) upwards.
9.2 Reassembly

9.2.3.8 Assemble dry-running protection device (TSE) (optional)

Assembling the dry-running protection device (TSE) (optional)

- Assemble dry-running protection device (TSE).
  - Refer to chapter Options and Additional accessories (chapter 12.1).

9.2.3.9 Smart Stator setting

**NOTICE**

Gap between stator halves due to inappropriate setting.
Possible leakage at stator.
- Set stator halves according to specified basic and precision setting.

Adjusting segments (635) - Basic setting

- Slide kinetic rings (670) by evenly tightening adjusting screws (639) until first marking groove on pressure branch (700) and suction casing (500) is visible.
9.2 Reassembly

Adjusting segments (635) - Precision setting

- Observe distance (X):
  - Use tool (WG).

9.4 / 9.5 Shaft sealing

9.4.1 Safety

⚠️ WARNING

 Shaft seal is leaky.
Leakage may escape into the atmosphere.
➢ Take safety measures to protect persons and the environment.
➢ Wear suitable protective clothing.
➢ Dispose of leakage appropriately.
➢ Note applicable regulations when handling hazardous substances.

9.4.2 Operating conditions and material combination

• Adjust to the relevant application

</tr>
<tr>
<td>1 x Clirclip (643)</td>
</tr>
<tr>
<td>1 x Support ring (682)</td>
</tr>
<tr>
<td>1 x Locking plate (683)</td>
</tr>
</tbody>
</table>
**10. Spare parts**

**Large wearing parts package**

Consisting of:

<table>
<thead>
<tr>
<th>Item Description</th>
<th>Qty.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 x Packing ring (set) (301) *</td>
<td></td>
</tr>
<tr>
<td>1 x Plug-in shaft (307)</td>
<td></td>
